JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

IN INSULAR POSSESSIONS.

HAWAII.

Examination of Rats and Mongoose.

Rats and mongoose have been examined in Hawaii as follows: Hilo, week ended July 11, 1914, 1,720; Honolulu, week ended July 18, 1914, 340. No plague-infected animal was found.

PHILIPPINE ISLANDS.

Cholera—Manila.

Surg. Heiser, chief quarantine officer and director of health for the Philippine Islands, reports that during the week ended July 11, 1914, 3 cases of cholera, with 2 deaths, had been notified in Manila, P. I. The report also stated that contacts of these cases had been examined and that 10 cholera carriers had been found.
